

ALS - MI Script.

GLOBAL MARK			
CLEAR PASS	BORDERLINE PASS	BORDERLINE FAIL	FAIL

Criteria

Introduces Self, confirms patient identify, Washes hands,	2, 1
PPE	1
Confirms team competencies	1
Explains Plan	
Summons appropriate help	
A – applies 15L O2	
B – quick assessment	
C – Asks for 12 lead, notes BP, and plethora, cannulates, sends bloods inc Troponin	
D – GCS 15, Checks BM	
E – ECG shows acute MI, knows territory V1-2 Septal - LAD V3-4 Anterior - LAD V5-6 Apical – LAD or RCA I, aVL Lateral LCx II aVF, III Inferior RCA	
Treats things appropriately Asks for Morphine, Nitrates, Aspirin, Prasugel	
Verbalises need for primary PCI	
Recognises cardiac arrest	
Starts CPR 30:2	
Manages airway – BVM and adjuncts	
Applies defibrillator pads if not already done so	
Recognises rhythm	
Delivers shock safely	
Considers Reversible Causes Hypoxia, Hypovolaemia, Hypothermia, Hyperkalaemia Thrombosis, Tamponade, Toxins, Tensions Pneumothorax	
Continues CPR	
Considers ECHO in life support	
Minimizes interruptions to CPR	
Utilizes ETCO2	
Discusses thrombolysis if there is going to be a long wait for PCI Alteplase 15mg IV bolus + 50mg over 30 mins + further infusion (max dose 100mg 90 mins).	
Deals with less than helpful cardiology SpR	
Plans for safe transfer of patient to cath lab/ICU	
Thanks team
